Introducing the All-New

12" Cladding Board

A larger cladding board made for your most **demanding projects.**

At Parallel Architectural Products we are committed to constant innovation, always working to provide our customers with industry-leading products that satisfy an unmet need – that's exactly why we perfected our all-new 12" cladding board.

This new board profile is designed to seamlessly integrate with our existing cladding system, offering unparalleled flexibility in design and application. Not only does the size help improve material and install efficiency, but it also offers a contemporary aesthetic that can elevate the design of any project.

Whether you are working on a large commercial development or need to speed up installation on a residential facade, this new addition promises to deliver efficiency and elegance.

Pre-order now in any of our [solid colors.](#)

12" cladding board stock available in Fall 2024.

Maximize Material Efficiency

When you opt for 12" cladding, it is easier to ensure that your building resources are used optimally, reducing your waste factor and lowering overall project costs.

Reduce Labor Costs

Because installation moves faster when less material is required, you can reduce your average labor costs by a third or more when compared to alternate cladding solutions.

Create a Unique Aesthetic

The contemporary look of 12" cladding installation ensures that your project will turn heads, while the timeless board design contributes to a clean, polished finish that suits various design styles.
