**Extruded Aluminum Woodgrain & Solid Color Cladding, Soffit, Battens, Fencing, Gates, Railing, Privacy Screens, and Pergolas**

**2 LU/HSW**

**Introduction to Aluminum Architectural Products**

**Course # 101 – HSW**

**Provider Number: 10096097**

**Purpose:**

*This course centers on the advancements of technology associated with the development of architectural extruded aluminum products, with a discussion on the process to manufacture aluminum extrusions and the development of woodgrain finishes and other finish options. We cover the health, safety, and wellness benefits of aluminum material while looking at the sustainability of aluminum versus other traditional construction materials. Lastly, we cover the multitude of uses of architectural extruded aluminum products in applications such as façade claddings, soffits, battens, fencing, gates, railings, privacy screens, and pergola options.*

**Learning Objectives:**

*Upon completion of this program, participants will be able to:*

- *Understand the manufacturing and finish process of woodgrain extruded aluminum products and recognize the contributing benefits of this process.*
- *Discuss the favorable attributes, including performance, sustainability, and aesthetics of architectural extruded aluminum products.*
- *Contrast the benefits of architectural extruded aluminum products to that of traditional and similar material specified such as lumber, and composites.*
- *State the range of uses, maintenance requirements, and cost considerations of architectural extruded aluminum products.*
