

Introducing Parallel Architectural Products'

Triple-Lock Battens

Patent Pending

An **easy-to-install** batten system designed to elevate **contemporary** architecture

Making your design and installation processes easier while maintaining exceptional aesthetics is what Parallel Architectural Products is all about – that's why we expertly engineered our Triple-Lock Technology.

Created as an alternative to our two-part batten system, Parallel Triple-Lock Battens are a sleek, self-mating option for achieving your desired design goals. Whether it's a quick privacy screen, an indoor feature wall, or an addition to your building's façade, these adaptable battens provide a solution that's **modern, low-maintenance, and durable** — as always.

2" x 4" Self-Mating Batten

2" x 4" x 20'

2" x 6" Self-Mating Batten

2" x 6" x 20'

2" x 8" Self-Mating Batten

2" x 8" x 20'

Flexible Orientation Options

Parallel self-mating battens feature our interlocking, Triple-Lock Technology that enables both flat-lay installation and striking dimensional patterns through varied depth orientations.

Clean, Seamless Finish

Thanks to the strategic design of the Triple-Lock batten walls, they create a seamless appearance when installed. Your installations will look clean and sophisticated, with minimal effort.

Simple Install with a Single SKU

Parallel Triple-Lock Battens snap together with themselves, streamlining inventory with a single SKU. Each installation requires two identical battens, eliminating the need for multiple components.

ARCHITECTURAL PRODUCTS

TRIPLE-LOCK Technology

Exceptional holding power delivers both security and aesthetics – **no compromises necessary with Parallel.**

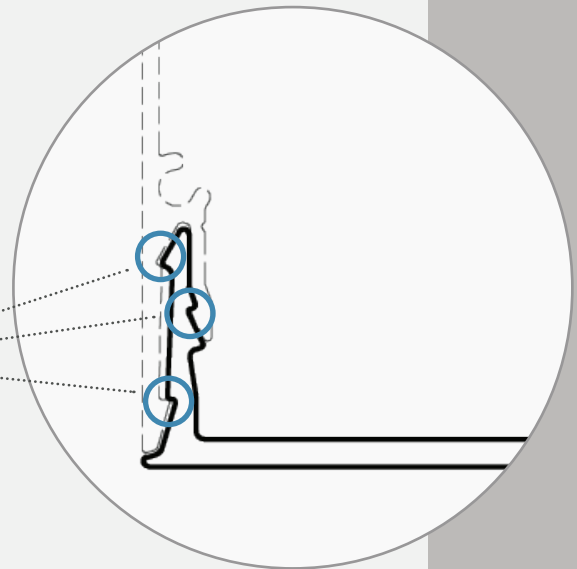

Why Choose Triple-Lock?

Each profile in our Triple-Lock batten system snaps together with itself — making installation easy, configurations flexible, and inventory management simple through a single, self-mating SKU. **With our Triple-Lock Technology, assembly is straightforward and secure, featuring three retaining edges that create a permanent, seamless attachment.** From interior feature walls to exterior façades, our battens deliver ease of use, enhanced reliability, and sophisticated aesthetics that outperform the competition.

Three interlocking connection points ensures superior strength and a **permanent bond** between two mated battens

Patent Pending

Us vs. The Competition

The competition's self-mating battens only have one or two points of connection – **we took it one step further.**

THE COMPETITION

Only **one** connection point
